DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,5,7,10,11,12 are rejected under 35 U.S.C. 102(b) as being anticipated by Iwai et al. U.S. patent no. 5,885,746 with the dye maximum supported by Farber U.S. patent no. 4,119,776.

Iwai teaches a photosensitive resin composition comprising a polymer binder, an ethylenically unsaturated monomer and a photopolymerization initiator (PI) composition. The PI composition comprises an initiator and an acid generating compound wherein the acid generating compound is 1-methyl-2-tribromosulfone-benzimidazole (col. 6, lines 36-41), having the formula below.

The formula meets the limitations of applicant's formulas in claims 1 and 5.

As shown in Ex. 8 in col. 16 the resin composition comprises 1. a binder, 2. a monomer, 4. a titanocene compound, 8. 1-methyl-2-tribromosulfone-benzimidazole and 7. a dye of Malachite green lactone (see ^{enclosed} CA reg. file formula and name). The dye has an absorption maximum at 427 nm as shown in Figure 3 of Farber U.S. patent no. 4,119,776.

Art Unit: 1752

3. Claims 1,2,5 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 10153860.

The Derwent abstract of JP 10153860 teaches a photosensitive resin composition comprising a colorant, a polymer binder, a monomer and a photopolymerization initiator (PI) composition having a tribromomethyl phenylsulphone or a di or tribromomethyl phenylketone having the formulas below.

Allowable Subject Matter

4. Claims 3,4,6,8,9,13-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach a photosensitive composition comprising the compounds or monomers claimed.

6. Claim 17 is allowed.

7. The following is an examiner's statement of reasons for allowance: The prior art does not teach a lithographic printing plate having a photosensitive layer composition of a polymer binder, an ethylenically unsaturated monomer, a photopolymerization initiator and a compound meeting the limitations of formula (1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
